

The state cancels subsidies for solar power generation

Will California get rid of solar incentives?

California is considered the bellwether for the nation's renewable energy policy. Solar advocates worry that getting rid of the incentive will slow the state's solar market, and will embolden opponents of rooftop solar incentives in other states to adopt similar policies.

What is a government subsidy for residential photovoltaics?

Policy variables. A government subsidy (Subsidy) for residential photovoltaics mainly refers to power generation subsidies, that is, a monetary reward for every kilowatt-hour of electricity generated by solar panels. The subsidy standards for each household are obtained from the National Development and Reform Commission (NDRC).

How did China's solar subsidy phase-out affect energy consumption?

The announcement of subsidy phase-out led to a larger energy "rebound effect". They adjusted electricity usage patterns to maximize revenue from solar electricity. With the impending post-subsidy era, the Chinese government has initiated significant reductions in household photovoltaic (PV) subsidies.

When will a new solar subsidy program take effect?

The new solar subsidy program approved by the commission will take effect in April. Homeowners and commercial businesses that want to install solar under more favorable terms have four months to lock in the existing incentives.

Did California cut a key incentive for rooftop solar?

The commission that regulates California's utilities decided to cut a key incentive for rooftop solar. That move has climate activists worried. The commission that regulates California's utilities voted unanimously to cut a key incentive for rooftop solar that helped make the state the largest solar market in the nation.
