

Thinkeco power Suriname

What is thinkeco power?

ThinkEco Power, a startup based in Vancouver, Canada, is tackling society's misconceptions about public transportation, specifically those that are sustainable. Stephen Kong, the company's founder, has utilized his passion for e-mobility and transportation to spearhead the development of a battery-powered ultra-light rail transit.

Can thinkeco power solve a transit problem?

ThinkEco Power's patent pending modular transit system is poised to solve this issue as it is actively rallying for private funding to initiate development. "Unlike traditional transit systems that are cost and time intensive to build, ThinkEco's offering can be operational in under two months.

Why is thinkeco power launching a modular transit system in Qatar?

ThinkEco Power and its partners have successfully launched this modular, eco-friendly transit system in Doha, Qatar, and are working on several other projects across Canada and the UK. Funding has been difficult to obtain due to concerns about safety and vested interests in protecting popular transit solutions, such as the diesel train market.

Why is thinkeco power a ultra-light transit system?

The ultra-light designation enables swift construction because these transit systems do not need to be separated from normal traffic nor do they require excavation. This is a major point why ThinkEco Power can feasibly launch its rail in many cities," Stephen says.

Who are ThinkEco Power Systems 's competitors? Alternatives and possible competitors to ThinkEco Power Systems may include netVendor, Photonic Technologies, and Guilin G-Link Technology.
