

Does Tunisia rely on gas?

Tunisia mostly relies on gas imports to meet its primary energy needs: almost 97% of its electricity generation came from gas in 2016. However, energy policy puts the emphasis on renewable energy. Electricity generation from wind power strongly increased

Does Tunisia have a solar power plant?

First utility-scale photovoltaic plant (10 MW, in Tozeur) was commissioned in 2019 on German money. Tunisia aims to generate 30% of its electricity from renewable sources by 2030. The country currently gets only 3% to 6% of its electricity from renewable sources, mostly from wind and hydro. Solar energy capacity is at 35 megawatts (MW).

Does Tunisia have a green wave of energy production?

This creates the overlap for biogas to take on some level of energy production in Tunisia's continued green wave of energy production. In 2016, Tunisia emitted 29 Mega tons of carbon dioxide equivalent (MtCO₂e) in greenhouse gases. The country aims to reduce its carbon intensity by 13% in 2030, compared to 2010 levels.

Is Tunisia a refinery?

The only refinery in the country, managed by the Tunisian Company of Refining Industries, is located in Bizerte. Its capacity is 34,000 barrels /day, which is a much lower production than the country's consumption, which therefore imports refined products, diesel chiefly. Refined petroleum is essentially imported too.

Could nuclear energy be a viable alternative to fossil fuels in Tunisia?

The Tunisian government has partnered with Russia and France in hopes of establishing nuclear energy as a viable alternative to fossil fuels and taking up a nontrivial chunk of the energy production in Tunisia. This is expected to be accomplished in the 2020s. Sousse thermal power station, combined gas cycle belonging to STEG.

Is Tunisia a natural gas producer?

Sousse thermal power station, combined gas cycle belonging to STEG. Wind farm of Sidi Daoud. Tunisia is a small producer of oil and natural gas. Oil production began in 1966, at 118,000 barrels/day in 1980, and reached 63,000 barrels/day in 2015. The country is a net importer from the year 2000 onwards.

Over the past decade, Tunisia's energy sector has faced significant challenges, resulting in a growing dependence on oil and gas imports and a widening of the financial deficit of the national electricity and gas utility STEG. Last summer, a critical moment was reached with the occurrence of significant power cuts, as STEG had neither the technical means nor the ...

The really massive prize for investors - and perhaps also for the country - lies in exporting green energy from Tunisia to Europe. But these projects depend on investors and offtakers seeing a stable governance regime. It would also help if investors on the domestic renewable power market were making progress. The webinar used the latest ...

3.1 Evolution of Energy Policy: From 1970 to 1990s. Tunisia was represented at the First Arab Energy Conference (1979), held to map available "traditional energy sources" in Arab states territories, then at the Second Arab Energy Conference (1982) which focused on "the impact of international developments on the status of energy in the Arab world," and aimed to ...

The energy sector in Tunisia includes all production, processing and, transit of energy consumption in this country. The production involves the upstream sector that includes general oil and gas, the downstream sector that includes the only refinery in Tunisia and most of the production of natural gas, and varied electrical/renewable energies. Renewable energy has ...

Tunisia: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across ...

Saied also stressed Tunisia's commitment to "providing a healthy and conducive environment to encourage businessmen and investors to invest in the country and establish partnerships and exchanges with their Tunisian counterparts in several promising sectors such as renewable energy, water desalination, healthcare, and the pharmaceutical ...

Tunisia has embarked on an impressive path toward renewable energy and energy efficiency. The Government released an update to the Tunisia Solar Plan in 2018-- an ambitious roadmap for their energy sector--which ...

The large-scale development of renewable energy could catalyze economic growth in Tunisia in several ways: firstly, by reducing energy cost and decreasing the need for subsidies; secondly, by making this energy ...

The Tunisia National Committee aims to promote sustainable energy development in Tunisia, as a part of the World Energy Council's energy vision. As a member of the World Energy Council network, the organisation is committed ...

Tunisia's already modest economic recovery almost halted in 2023, amidst a severe drought, tight financing conditions and the modest pace of implementing reforms. With . Tunisia Economic Monitor - Renewed energy to the Economy : Spring 2024

The German-Tunisian Energy Partnership was founded in early 2012 when the foreign ministers of the two countries signed a joint Memorandum of Understanding on collaboration in the energy sector with a particular focus on renewable energy. Thanks to its geographical location, Tunisia has a significant potential for

renewables.

Tunisia's ambitious plan to increase renewable energy production is geared toward reducing its overreliance on imported gas for its power generation that threatens its energy security. The Kairouan Solar Project will be the first milestone to achieve the government's plan and will pave the way for further private investments in the sector.

The most important figure in the energy balance of Tunisia is the total consumption of . 19.06 billion kWh. of electric energy per year. Per capita this is an average of 1,530 kWh. Tunisia could be self-sufficient with domestically produced energy. The total production of all electric energy producing facilities is 21 bn kWh, which is 111 ...

CO 2 emissions are dominated by the burning of fossil fuels for energy production, and industrial production of materials such as cement.. What is the contribution of each fuel source to the country's CO 2 emissions?. This interactive chart shows the breakdown of annual CO 2 emissions by source: either coal, oil, gas, cement production or gas flaring. This breakdown is strongly ...

Tunisia mostly relies on gas imports to meet its primary energy needs: almost 97% of its electricity generation came from gas in 2016. However, energy policy puts the emphasis on renewable energy. Electricity generation from wind power strongly increased

Against the odds, the Tunisian government is trying to get its authorisation programme for procuring small, on-grid solar PV projects back on track. It has launched a fifth bidding round and set a new feed-in tariff structure applicable to both current and past projects. It needs to persuade investors that things will be different this time.
