What is long duration energy storage (LDEs)?

Long Duration Energy Storage (LDES) is a key option to provide flexibility and reliability in a future decarbonized power system. A variety of mature and nascent LDES technologies hold promise for grid-scale applications, but all face a significant barrier--cost.

Will long duration energy storage be a commercial liftoff?

As outlined in the March 2023 DOE report Pathways to Commercial Liftoff: Long Duration Energy Storage, market recognition of LDES's full value, through increased compensation or other means, will enable commercial viability and market "liftoff" for many technologies even before fully achieving the Storage Shot target.

Should long-duration storage be a cost effective energy source?

The DOE views long-duration storage as an essential part of making wind and solar energy a reliable, round-the-clock power source. Its goal is to see costs for long-duration storage drop 90% by the end of this decade, which would make it a cost effective tool for the low carbon grid of the future.

Why is energy storage more expensive than alternative technologies?

High capital cost and low energy density make the unit cost of energy stored (\$/kWh) more expensive than alternative technologies. Long duration energy storage traditionally favors technologies with low self-discharge that cost less per unit of energy stored.

How do different studies of Energy Storage differ?

This range reflects how different studies of energy storage often consider different aspects, including different technologies (e.g., a battery with 4 hours of capacity, which has longer duration than most currently deployed) or different grid scenarios (e.g., a study of a future grid with very different required attributes than today's).

What is energy storage Grand challenged?

The initiative was part of DOE's Energy Storage Grand Challenge, a comprehensive, crosscutting program to accelerate the development, commercialization, and utilization of next-generation energy storage technologies and sustain American global leadership in energy storage.
