

What will ESA do in the Cosmic Vision 2015-2025?

To continue its prominent role, ESA needs to choose carefully further aspects of planetary science to pursue in the Cosmic Vision 2015-2025 timeframe. The main goal should now be an in-depth exploration of one of the giant planets in the outer Solar System, of which Jupiter is the most accessible.

What can we learn from the Solar System?

Understanding how the Sun behaves over a range of timescales, how the planets can be shielded from its radiative and plasma output, why the nine Solar System planets are so different from one another, and what the small bodies such as comets and asteroids can tell us about our origins - these are only a few aspects of the question.

What is the Cosmic Background Explorer?

The Cosmic Background Explorer (COBE) was launched on November 18, 1989. Its mission was to study the microwave sky in order to detect radiation emitted by the Big Bang. Scientists have been very excited about the information from this probe because they believe it has actually peered back 15 billion years in time!

It navigates the solar system, detailing the inner and outer planets, asteroids, comets, and orbital characteristics. Beyond our cosmic neighborhood, the guide extends into galaxies, cosmology, including the Big Bang Theory, and the enigmatic realms of ...

This beautiful 1 Oz Silver coin is dedicated to the Solar System, figuratively intended as one of the Kings of Astronomy, belonging to the "Cosmic Investment" series. The coin has a great design with a brilliant coloration and one fragment ...
