Reactivation . You wish to reuse your activated carbon for your application: BATREC has developed a unique process allowing reactivating of activated carbon highly contaminated by difficult pollutants, giving them a second life.

Having absorbed these toxins the catalysts then need replacing, and it is at this point that Batrec Industrie can detoxify and then recycle the products. Such a process is utilised in refineries across the world enabling Batrec Industrie to build up a diverse client base including oil and gas majors such as Shell, ConocoPhillips, and BP.

These mercury containing batteries are collected by local and national authorities and then sent to BATREC for recycling in accordance with current environmental legislation. The mercury contained in the batteries vaporizes during the first processing step by pyrolysis between 700 and 800°C. It will then be recovered and processed in our facility.

In 2013, BATREC officially joined VEOLIA as part of SARP Industries. SARP Industries is specialised within the Veolia Group in the treatment of hazardous waste. SARPI is present in 6 geographical areas and treats more than 46 million tons of hazardous waste per year.
