

What type of energy does Venezuela use?

Venezuela relies heavily on domestic production of fossil fuels, with oil and natural gas comprising approximately 90% of the country's total energy supply. Hydro power also plays a key role in electricity generation, accounting for roughly half of installed capacity.

Why is the Venezuela oil industry in turmoil?

Venezuela oil industry is in turmoil. Venezuela's oil rigs, which had been producing nearly 3 million barrels of crude oil a day in 2014, produce now less than a million barrels a day. In addition to the economic collapse of Venezuela, U.S. sanctions against the country made it almost impossible to route bank payments to Venezuela.

How much power does Venezuela have?

Venezuela's installed electrical capacity totals just over 30 GW, split roughly equally between fossil fuels and hydropower. The country's largest single power generator is the Guri hydroelectric project (also known as the Simon Bolivar hydroelectric project), with an installed capacity of 10,235 MW.

How does Venezuela's economic policy affect energy consumption?

Venezuela's restrictive economic policies (Figure 3) have resulted in a decrease in inflation-adjusted GDP per capita, which has led to a decrease in energy consumption (Figure 4). Venezuela has the refining capacity to meet its domestic demand, but the country's refineries are in poor condition.

Will Venezuela suffer a deterioration of its power in international affairs?

Venezuela may suffer a deterioration of its power in international affairs if the global transition to renewable energy is completed. It is ranked 151 out of 156 countries in the index of Geopolitical Gains and Losses after energy transition (GeGaLo).

How is natural gas used in Venezuela?

Venezuela's natural gas reserves are still underutilized, and a large portion of the country's current natural gas output is used to supplement the output of mature oil fields rather than sold to generate revenue.²⁴ A portion of this natural gas (about 30%) is reinjected into oil fields to increase crude oil production.

Venezuela ranked 11th in the world for oil production in 2016; production has since fallen steeply. The largest oil company is Petroleos de Venezuela (PDVSA). Oil fields in the country include Bolivar Coastal Field, Boscon Field, Maracaibo Basin and Orinoco Belt. In 2023, Venezuela held the world's largest proven oil reserves at 303 billion barrels, accounting for 17% of global reserves, mostly extra-heavy crude from the Orinoco Belt. Despite this, producti...
