

What roofs cannot be installed with photovoltaic panels

Do you need planning permission to install solar panels on your roof?

An increasing number of people are investing in solar energy. More and more homes are having solar panels, or solar tiles, installed on their roofs. Of course, with such installations, the topic of planning permission and building regulations often comes to the surface.

Should solar panels be installed on a flat roof?

For this reason, solar panels on flat roofs often require planning permission. What's more, the installation should be planned so it minimises the visual impact on the house and local area, as far as possible. And solar panels should be removed if they're no longer in use. How many solar panels can I install on my roof?

Can I use solar roof tiles instead of solar panels?

What you need to do is speak to your local council and let them know about your decision to install. Unless there is a valid reason to state otherwise, permission for the installation should be granted. In some conservation areas (such as historical ones), it may be requested that you use solar roof tiles instead of panels.

How many solar panels can be installed on a roof?

Your roof will need to be large enough to fit a suitable number of solar panels, as there's rarely much point putting just two or three panels up there. The average solar panel takes up 2m², and your installer should leave around 40cm on each side of the array, as well as 3cm between every panel.

Can a UK roof support solar panels?

As long as your roof is pitched, has enough unshaded space, and doesn't contain spray foam insulation underneath, it should be suitable for solar panels. The large majority of UK roofs are more than capable of supporting solar panels for as long as you need them to.

Can solar panels be installed on an asbestos roof?

Installing solar panels on an asbestos roof is a lot trickier than any other type - many installers won't want to touch those projects with a bargepole - but it's not impossible. Rafters are fitted over the roof to support the solar modules, without disturbing the asbestos cement.

In addition, solar panel systems can be installed on a place where is not shaded, but solar shingles cannot avoid that if your house is surrounded by some tall trees. Shading is an important factor to consider when you choose between ...
