Are photovoltaic solar panels safe?

The risks associated with the use of renewables are often overlooked and this poses serious problems for insurers. However, we are keen to support our customers and to provide guidance on how photovoltaic solar panel systems can be installed and used safely.

Are photovoltaic panels harmful to the environment?

As with any industrial product there is an environmental impact associated with photovoltaic panels. The main areas of potential concern are: Toxic and other potentially harmful materials used or created during manufacture. What happens to them at the end of their lifetime.

Are solar panels fire safe?

Recommendations for fire safety with PV solar panel installations is a joint code of practice for fire safety with photovoltaic panel installations, with a focus on commercial rooftop mounted systems, but it has lots of guidance for solar panel systems in general too.

Are solar panels dangerous?

Solar panels are essentially an additional electrical appliance in your home. They should be considered similarly to refrigerators and air conditioners regarding the danger they bring to your home. Electrical surges are not uncommon for grid-tied homes, and most homes are already equipped to prevent damage from surges.

How do solar installers ensure the safety of a solar panel system?

Solar installers ensure the safety of your solar panel system in two ways: solar panel grounding and rapid shutdown. When installing a solar panel system, one of the key ways to keep yourself safe from electrical surges is to ground your panels.

Are solar panel problems common?

Solar panel problems are common. Nearly seven in 10 solar panel owners we surveyed have had no technical problems with their solar panel system since it was installed. Among those who did report a technical fault, inverter problems were by far the most common. Some 15% of owners in our survey reported an inverter problem.
