

What is the energy supply in Iceland?

In terms of total energy supply, 85% of the total primary energy supply in Iceland is derived from domestically produced renewable energy sources. Geothermal energy provided about 65% of primary energy in 2016, the share of hydropower was 20%, and the share of fossil fuels (mainly oil products for the transport sector) was 15%.

When did Iceland start using hydroelectric power?

In the 1960s, interest in the idea of using hydroelectric power in Iceland for the aluminum industry increased. In response Landsvirkjun built Bessifell, Iceland's first large-scale hydroelectric station in 1972--specifically to power an aluminum smelter. 55 The trend of Landsvirkjun constructing hydro-plants to power smelters has since continued.

What is geothermal energy used for in Iceland?

Geothermal power is used for many things in Iceland. 57.4% of the energy is used for space heat, 25% is used for electricity, and the remaining amount is used in many miscellaneous areas such as swimming pools, fish farms, and greenhouses. The government of Iceland has played a major role in the advancement of geothermal energy.

Iceland: Energy intensity: how much energy does it use per unit of GDP? Click to open interactive version. Energy is a large contributor to CO₂ - the burning of fossil fuels accounts for around three-quarters of global greenhouse gas emissions. So, reducing energy consumption can inevitably help to reduce emissions.
